Basic Features

Sort movies by Genre/rating

Maybe way to add friends and see their recommended movies?

User inputs movies/shows they like and the computer does the rest

Movies and shows will give info to the user of where they can watch at. (Example: if its available on Netflix or Hulu it would say that)

Gives list of people with similar movie/shows preferences and gives the option to friend them

System will automatically generate movies/shows it thinks you may like

Recommend movies/shows to friends and followers

Advertising and Marketing

QR Codes around campus

Add events on garnet gate for public movies at gamecock theatre

Maybe a social media page?

Movie group in blackboard?

Platforms

Account-based website and app, sign in with student login

^^^ requiring student email to log in keeps it inside the school

Possibly make a different platform for each UofSC campus

Ability for user to add their campus to the app, if compatible.

Feedback

Way to review movies and share reviews

Weekly vote on what movies show at gamecock theater

Users can add movies (would require submittion for verification)

Hurdles

Need permission to show movies in university theater

Someone / group of people to oversee reviews to prevent issues and upkeep / update site(s)

Need a large group of programmers to make this a possibility

Volunteers? Would have to generate money for pay otherwise

Time to program / design the app and website

Server for storing the information / programs
